

ODX-6000

6000VA DC/AC INVERTER

GENERAL FEATURES:

- Sine wave output voltage
- Suitable for motors control
- Adjustable output frequency
- Adjustable output voltage
- High input-output isolation 3000Vrms
- Remote off opto-coupled
- Alarm by isolated relay contacts
- Configurable input: Reverse or Mid power
- Remote control via RS232
- CAN BUS (optional)
- Parallelable output (optional)
- Railway version EN50155 (optional)
- Fire and smoke: EN45545-2 approved

DESCRIPTION

The ODX-6000 consists of three phase sine-wave DC-AC inverters with galvanic isolation between input and output.

The unit allows:

- Changing the output frequency by means of DIP-switch-7 of SW1. OFF: 50Hz or default programmed, ON: 60Hz
- Change local/remote (waiting RS-232 commands) by means of DIP-switch-6 of SW1. OFF: local, ON: remote
- Shutdown applying voltage output 15 to 143V on pins 3 and 4 of J4
- Start-up motors by means of a soft start. In the start-up, the output voltage rises linearly from 0V to set voltage and the frequency from the initial to the set one. The start-up ramp slope may be changed via RS-232
- Set the rotation speed of a motor according to the appropriate Voltage/Frequency ratio.
- Configurable input (pin 1 and 2 of J4):
 - Reverse mode: Changing the rotation direction for the next start-up of a motor by applying voltage between 15 and 143V.
 - Mid power mode: Changing the output frequency in V/F mode from nominal to a mid-power frequency by applying voltage between 15 and 143V.
- Monitoring the status of the input and output voltage through the contacts of two separate solid state relays.
- Set and monitor parameters via RS-232.

The ODX-6000 is equipped with a maximum average power protection as well as maximum output peak current protection. This protects the semiconductors even when an output short-circuit occurs. It also features a disable function for input under-voltage, which allows protecting the batteries from harmful discharges.

START-UP

- The unit has 6 threaded holes for the fixation on a mounting surface.
- The unit has internal fans. For an appropriate cooling, the air input and output should be free of elements that cause and an air flow reduction (minimum recommended distance to other objects 90mm).
- Make connections as shown in the figure.
- The default output frequency is 50Hz. For 60Hz simply actuate the dip-switch as indicated in the figure.

For safety reasons, the following requirements must be met:

- Provide the equipment with some kind of protective enclosure that complies with the electrical safety directives in effect within the country where the equipment is installed.
- Include an input fuse with a rating immediately higher than the maximum input current.
- Use cables of adequate cross-section to connect inputs and outputs. The following table lists the maximum currents and the minimum cross-sections for the cables used for each power connection.

| | Input 24V | Input 48V | Input 72V | Input 110V | Output 400V |
|---------------------|----------------------------|---------------------------|---------------------------|---------------------------|----------------------------|
| Maximum current | 232 A | 191 A | 127A | 83A | 8.7A |
| Cable cross-section | 150 mm ² | 95 mm ² | 50 mm ² | 25 mm ² | 2.5 mm ² |

RS232 communication port

It is possible to control and monitor de unit via RS232 by means of an application tool named PAM. This application is free and can be downloaded from the Premium web side

Also it is possible to control and monitor de unit directly using the protocol showed in table:
